marketing@akymco.com

We are Akym, one of the leading diversified products providing companies. Since its establishment in 2017, Akym has continuously achieved growth through endless challenges as a trading company. Akym's founders have more than 10 years of experience in supplying mineral products and petrochemicals to customers worldwide. The company is also able to supply chemicals, polymers and raw materials. We deliver to our clients not only high-quality products, but also respect, integrity, responsibility, and transparency; factors that have helped to make Akym a well-known name for customers and a positive competitor for other suppliers.

Akym will become a world-class corporation that creates new value for our customers based on "integrity, responsibility and respect."

Polyolefins

Polyolefins are the largest group of thermoplastics, with the two most popular types being polypropylene and polyethylene, due to their wide variety of applications. Polyolefins are polymers formed from simple olefins such as ethylene, propylene, butenes, isoprenes or pentenes, or from copolymers and derivative modifications.

High-Density Polyethylene (HDPE)

Medium Density Polyethylene (MDPE)

Low-Density Polyethylene (LDPE)

Linear Low-Density Polyethylene (LLDPE)

Polypropylene Homopolymer (PPH)

Polypropylene Copolymer (PPC)

Polypropylene Random Copolymer (PPC Random)

Styrenics

Styrene polymers take styrene as a monomer.

Polystyrene (PS) is the main polymer in this category by volume of consumption, followed by acrylonitrile butadiene styrene (ABS). Polystyrene properties make it ideal for a large number of applications in many industries, such as construction, packaging and consumer goods.

General Purpose Polystyrene (GPPS)

High Impact Polystyrene (HIPS)

Acrylonitrile Butadiene Styrene (ABS)

Engineering polymers

Engineering polymers are a group of plastic materials that have improved mechanical and thermal properties that make them ideal for all types of engineering applications, replacing traditional materials equal or greater in weight, hardness or other properties, while being much simpler to manufacture, especially with complex shapes.

Polyamides

Masterbatch

Compounds

Other polymers

Akym can supply any type of polymer for your company. In this category, we will introduce some other types we work with.

Elastomers

Additives

And any raw materials and products related to plastic industry.
